Patent No. US20020061518A1

GENERAL INFORMATION:
APPLICANT: Penny, Laura
APPLICANT: Penny, Laura
TITLE OF INVENTION: Genctyping the Human
TITLE OF INVENTION: UDP-Glucuronosyltransferase 1 (UGT1) Gene
TITLE OF INVENTION: UDP-Glucuronosyltransferase
CURRENT APPLICATION NUMBER: US/09/305,856B
CURRENT FILING DATE: 1999-05-05
PRIOR PILING DATE: 1999-05-05
NUMBER OF SEQ ID NOS: 124
SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 289
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                            This invention describes novel agonists (competitive inhibitor) and/or inhibitors of amyloid formation peptides which are 3-15 amino acids in length and contain at least the active sequence GA. The new peptides are useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus, Alzheimer's disease and spongiform encephalopathies (e.g. CJD, scrapie and BSE).
                                                                                                                                                                                           Gaps
                   Peptides containing amino acid sequence GA - useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus
                                                                                                                                                                                          ;

The new peptides are useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus, Alzheimer's disease and spongiform encephalopathies (e.g. CJD, scrapie and BSE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptides containing amino acid sequence GA - useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Agonist; cytotoxic; competitive inhibitor; amyloid formation; type II diabetes mellitus; Alzheimer's disease; CJD; scrapie; spongiform encephalopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (FRAU ) FRAUNHOFER GES FOERDERUNG ANGEWANDTEN.

                                                                                                                                                                                                                                                                         This sequence represents a molecular mimetic of a unique epitope of Neissria meningitidis serotype B (MenB). This sequence was isolated using the antibodies (Ab) of the invention. The Ab are directed against a MenB capsular polysaccharide (PS) derivative, and are not autoreactive. The Ab either do not cross-react or they are minimally cross-reactive. The Ab either do not cross-react or they are minimally cross-reactive. The Ab either do not cross-react or they are minimally cross-reactive. The non-autoreactive Ab are particularly useful for identifying molecular mimetics of unique MenB PS epitopes that can be used in vaccine compositions. Furthermore, the Ab, humanised on the Ab, crompositions. Furthermore, the Ab, humanised on the Ab, fragments and functional equivalents, will also find use in passive immunisation against, and/or as an adjunct to therapy for, MenB and Escherichia coli Kil disease. Such disease includes bacterial meningitis and sepsis in infants, children and adults. The anti-MenB Ab can also be used to investigate the bactericial and/or opsonic function of Ab of different specificities, as well as to identify the molecular nature of the unique epitopes on the MenB bacterial surface that are not cross-reactive with host PS. The anti-MenB Ab can be used to isolated fractions of MenB bacterial or MenB PS derivatives. Once isolated fractions of MenB bacteria or MenB PS derivatives. Once isolated employed directly in oligosaccharide protein conjugate vaccines or to model synthetic saccharides or mimetics for use in vaccines.

```
This sequence is amino acids 24-31 of beta-amyloid. This sequence can be used to generate cyclic peptide AAY39233. The cyclic peptide competes with and competitively inhibits beta-amyloid binding to the p75 neurotrophin receptor (p75NTR). P75NTR is a low affinity nerve growth factor (NGF) receptor which is expressed by melanocytes and keratinocytes of the basal epidermis. Apoptosis can be inhibited by p75NTR via the upregulation of the Bal-2 protein. If the receptor is occupied by examples of appropriate ligands e.g. neurotrophins, apoptosis is inhibited. Other examples of appropriate ligands include this cyclic peptide. This peptide is based on the sequence of the binding fragment of beta-amyloid, which in methods to control or manipulate keratinocyte or melanocyte cell death. The methods involve using this peptide or peptides AAY39234-Y39235 to bind as a pseudo-ligand to the p75 neurotrophin receptor, inhibiting apoptosis. The new method can induce or maintain hair growth, hair colour or skin colour. Inducing or maintaining hair growth is useful for treating alopecia areata or male pattern baldness in vertebrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Agonist; cytotoxic; competitive inhibitor; amyloid formation; treatment; type II diabetes mellitus; Alzhelmer's disease; CJD; scrapie; BSE;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                          Controlling or manipulating melanocyte and keratinocyte cell death, useful for treating, e.g. alopecia areata
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the isolation of a novel subgroup of the human themunodeficiency virus (HIV) type 1, designated group O. In particular, the inventors have isolated 2 new strains of the group O virus: strains VAU and DUR. Strain VAU was isolated from a French ALDS patient and has homology to the recently characterised Cameronian HIV strains ANT70 and WPS180. The DUR strain was isolated from a scropositive patient from the Camerons who showed atypical seroreactivity. The peptides AAW07225-30 represent peptides derived from the strain DUR gpl20 protein V3 loop. The DNA and protein sequences are used to generate peptides for detection of antibodies from patients infected with the new group O strains, as well as primers and probes to detect the viral nucleic acid sequences derived from these strains are able to distinguish between the group O and group M viral strains.
                                                                                                                    Human immunodeficiency virus; subgroup; strain; AIDS; homology; envelop; gpl20; gp41; seropositive; antibody; primer; probe; group 0; group M.
                                                                                                                                                                                                                                                                                                                                                                      New antigenic HIV-1 group O strain proteins and related nucleic acids - useful in diagnosis, vaccines, therapy etc., of infection by HIV-1 group O strains VAU or DUR

Degining and the end of the fragment. The invention relates to the beginning and the end of the fragment. The invention relates to a new method for evaluating the risk of an individual to develop Alzheimer's disease using cultured neural creat-derived melanocytes. Also disease using cultured neural creat-derived melanocytes. Also described are methods of therapy for Alzheimer's disease using peptides (AM45543-6) that bind to the neurotrophin receptor p75 nerve growth factor receptor (MGFR) and competitively inhibit the binding of a beta-amyloid to the p75 NGFR. The methods can be used for disgnosing and rediating Alzheimer's disease and other neurodegeneration of the low affinity NGFR localised on neural cell surfaces, such as autoimmune enclated by beta-amyloid protein, or by aberrant activation of the low affinity NGFR localised on neural cell surfaces, such as autoimmune concephicompetitis, Huntington's disease, cortico-basal degeneration, progressive supra-nuclear palsy, Gerotman-Shaussless Scheinker syndrome, Neimann-Pick disease, and progressive supranuclear palsy. In the firm skin biopsies, are good model cells for the study and diagnosis of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Molecular mimetic; epitope; serotype B; MenB; capsular polysaccharide; immune disease; non-autoreactive antibody; vaccine; passive immunisation; Escherichia coli KI disease; bacterial meningitis; sepsis; oligosaccharide protein conjugate vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents residues 24 to 31 of beta-amyloid. A cyclic peptide was synthesised by attaching two cysteine residues to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Evaluating risk of individual to develop Alzheimer's - uses cultured epidermal melanocyte(s), also useful for developing therapies for neuro-degenerative diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                    similarity with bovine serum albumin (BSA). These regions of similarity with bovine serum albumin (BSA). These regions of similarity may contain epitopes shared by the PM-1 molecule and BSA. It has been shown that many patients with Type I diabetes have elevated levels of anti-IgG anti-BSA antibodies. Thus, BSA may represent a target antigen for cow milk induced islet autoimmunity. Peptides comprising amino acids residues shared by the PM-1 protein and BSA may be useful in the form of a therapeutic composition to treat an autoimmune disease, such as Type I diabetes in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence analysis of the PM-1 protein revealed two regions of similarity with bovine serum albumin (BSA). These regions of similarity may contain epitopes shared by the PM-1 molecule and BSA. It has been shown that many patients with Type I diabetes have elevated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        similarity with bovine serum albumin (BSA). These regions of similarity with bovine serum albumin (BSA). These regions of similarity may contain epitopes shared by the PM-1 molecule and BSA. It has been shown that many patients with Type I diabetes have elevated levels of anti-1gG anti-1BSA antibodies. Thus, BSA may represent a target antigen for cow milk induced islet autoimmunity. Peptides comprising amino acids residues shared by the PM-1 protein and BSA may be useful in the form of a therapeutic composition to treat an autoimmune disease, such as Type I diabetes in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the preparation of DNA, in a circular vector, that encodes one or more segments of a modular polypeptide. DNA or DNA libraries produced this way are used to produce modular polypeptides, particularly enzymes, which can be used to act on substrates to produce compounds for therapeutic testing. Enzymes of particular interest are those involved in non-ribosomal peptide synthesis or polyketide synthesis, and compounds for testing are particularly macrolide antibiotics, including penicillins, vancomycins or exthremoyerins, but may also be modular receptors. The present sequence is a fragment of protein encoded by a Streptomyces chrysomallus actinomycin blosynthesis gene which was used in a plasmid in the exemplification of
                                                                                                                                                                                                                                                                                                                                 Modular enzyme system; cyclic gene synthesis; repetitive coding sequence; antibiotic; non-ribosomal peptide synthetase; NRPS; PKS; polyketide synthase; actinomycin biosynthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preparing DNA encoding modular protein for e.g. producing new enzymes for synthesis of polyketide antibiotics, comprises cyclic integration of fragments into a vector

```
Sequence analysis of the PM-1 protein revealed two regions of similarity with bovine serum albumin (BSA). These regions of similarity may contain epitopes shared by the PM-1 molecule and BSA. It has been shown that many patients with Type I diabetes have elevated levels of anti-IgG anti-BSA antibodies. Thus, BSA may represent a target antigen for cow milk induced islet autoimmunity. Peptides comprising amino acids residues shared by the PM-1 protein and BSA may be useful in the form of a therapeutic composition to treat an autoimmune disease, such as Type I diabetes in an individual.

vector, that encodes one or more segments of a modular polypeptide. DNA libraries produced this way are used to produce modular polypeptides, particularly enzymes, which can be used to act on substrates to produce compounds for therapeutic testing. Enzymes of particular interest are those involved in non-ribosomal peptide synthesis or polyketide synthesis, and compounds for testing are particularly macrolide antibiotics, including penicillins, vancomycins or erythromycins, but may also be modular receptors. The present sequence is a fragment of protein encoded by a Streptomyces chrysomallus actinomycin biosynthesis gene which was used in a plasmid in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modular enzyme system, cyclic gene synthesis; repetitive coding sequence; antibiotic; non-ribosomal peptide synthetase; NRPS; PKS;
inhibitors of amyloid formation peptides which are 3-15 amino acids in length and contain at least the active sequence GA. The new peptides are useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus, Alzheimer's disease and spongiform encephalopathies (e.g. CJD, scrapie and BSE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     relates to the preparation of DNA, in a circular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Preparing DNA encoding modular protein for e.g. producing new enzymes for synthesis of polyketide antibiotics, comprises cyclic integration of fragments into a vector

                                                                                                                                                                                                                                                                                  This is an example of a lysine donor peptide that can be utilised in novel recombinant protein polymers of the invention. Such polymers (see AAM49710-28) typically comprise a repetitive amino acid backbone of repetitive units having a collagen, fibroin, elastin or keratin motif and at least 2 enzyme recognition sequences comprising a glutamine and/or lysine capable of enzyme catalysed isopeptide formation. The polymers are capable of covalant crosslinking by enzymatic reaction to form products which set quickly and have good adhesive properties and high strength. They can be used as medical adhesives and sealants, in the closure of wounds and repair of damaged tissues, prosthesis coatings, drug depots, and matrices for the transplantation of cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptides containing amino acid sequence GA - useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The peptides AAR80371-7 are examples of lysine donor peptides which can be used to generate protein polymeric adhesion substrate (PPAS) contg. repeats of non-fibrin cross-linking donor peptide sequences (see AAR80345-50 for examples of PPAS proteins). The PPAS proteins ab used as substrates in enzymatic cross-linking reactions catalysed by a transglutanthnase enzyme e.g. Factor VIII or XIII. The polymers can be used in biological systems where in situ formation of a biocompatible material with structural integrity is required e.g. as medical adhesives and sealants or for wound closure or tissue repair.

pain); and to treat schizophrenia, tardive dyskinesia and acute dystonic reactions, rheumatoid arthritis, and epilepsy. The present sequence represents a omega-conopeptide group I fragment. Omega-conopeptide components of peptide toxins produced by marine snails of the genus Conus, and which act as calcium channel blockers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A method has been developed for the treatment of inflammation in a subject. The method comprises administration of an omega-conopeptide effective to: (i) block voltage-gated calcium channels; (ii) bind with high affinity to an omega-conopeptide binding site; and (iii) inhibit neurotransmitter release from nervous tissue. The method is used to treat inflammation and associated pain. The treatment can also be used to produce analgesia (especially in subjects experiencing neuropathic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treatment of inflammation, comprises administration of omega-conopeptide - effective to block voltage-gated calcium channels, bind with high affinity to omega-conopeptide binding site, and inhibit neuro-transmitter release
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein polymer; adhesive sealant; wound healing; cross-linking.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

The peptides are used to enhance the analgesic effect produced by an optate in a mammalian subject. The method comprises administering to the subject an omega-conopeptide which is able to inhibit electrically stimulated contraction of the guinea pig ileum and bind to omega-conopeptide MVIIA binding sites present in neuronal tissue. Omega-conopeptides are useful for enhancing the analgesic effect produced by an opiate. Omega-conopeptides may also be used in the treatment of pain, in reducing neuronal damage related to an ischemic condition in mammals, and in treating schizophrenia, tardive dyskinesia and acute dystonic reactions, inflammation and epilepsy.
                                                                                                                                                                                                                                                                                                                                                          Omega-conopeptide; voltage-gated calcium channel inhibitor; analgesic; peptide toxin; opiate; pain; neuronal damage; ischemic condition; schizophrenia; tardive dyskinesia; acute dystonic reaction; inflammation; epilepsy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            vector, that encodes one or more segments of a modular polypetide. DNA or DNA libraries produced this way are used to produce modular polypetides, particularly enzymes, which can be used to act on substrates to produce compounds for therapeutic testing. Enzymes of particular interest are those involved in non-ribosomal peptide synthesis or polyketide synthesis, and compounds for testing are particularly macrolide antibiotics, including penicillins, vanconycins or erythromycins, but may also be modular receptors. The present sequence is a fragment of a protein encoded by a Streptomyces chrysomallus actinomycin blosynthesis gene which was used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                               Modular enzyme system; cyclic gene synthesis; repetitive coding sequence; antibiotic; non-ribosomal peptide synthetase; NRPS; PKS; polyketide synthase; actinomycin biosynthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the preparation of DNA, in a circular

                                                                                                                                                       The invention relates to novel pyrrolobenzodiazepine (PBD) derivatives which are compounds that bind to the minor groove of double stranded mucleic acid sequences, especially at the sequence Purine-Guanine-Purine where Purine is selected from anonine and guanine. The PBD's can be used in combinatorial peptide library screening for binding interactions with nucleic acids. The PBD's can be used in cytotoxic, antibiotic, antiparastitic and antiviral compositions and also in methods of target validation in functional genomics. The peptides AAV83826-Y83833 represent PBD-peptides isolated from a combinatorial peptide library screen on the target nucleic acid sequence
New pyrrolobenzodiazepine derivatives used in the preparation of combinatorial libraries of further pyrrolobenzodiazepine derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibacterial; antiparasitic; cytostatic; pyrrolobenzodiazepine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY8383
```

g

The invention relates to novel pyrrolobenzodiazepine (PBD) derivatives which are compounds that bind to the minor groove of double stranded nucleic acid sequences, especially at the sequence Purine-Guanine-Purine

```
where Purine is selected from adenine and guanine. The PBD's can be used in combinatorial peptide library screening for binding interactions with nucleic acids. The PBD's can be used in cytocoxic, antibiotic, antibiotic, antiparasitic and antiviral compositions and also in methods of target validation in functional genomics. The peptides AAY838326-Y83833 represent PBD-peptides isolated from a combinatorial peptide library screen on the target nucleic acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 inflammation. The method comprises measuring a cest compound to treating inflammation. The method comprises measuring the activity of the test compound in blocking voltage-gated calcium channels, binding to the omega conopeptide binding site and inhibiting norepinephrine (noradrenaline) release from nervous tissue. The method is useful for selecting compounds for treating inflammation. The selected compounds are capable of producing analgesia in a mammalian subject with chronic or intractable pain. Nalgesia caused by selected compounds may reduce the reliance on opioid analgesic agents of the prior art which cause dependency and tolerance, requiring potentially dangerous increases in opioid doses to achieve the analgesic effect. The present sequence represents a peptide given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A method has been developed of selecting a test compound for treating

                                                                                                                                                                                                                                     Novel enterocyte growth factors and method for their isolation from intestinal mucosa, useful for treating e.g. cancer -
                                                                                                                                                                                                                                                                               The present sequence is that of inhibiting enterocyte growth factor IEGF17 (mol.wt. 1.15-1.35 kba). The invention provides stimulating and inhibiting enterocyte growth factors (enterocytogenins) (see AAY95755-69) that influence the speed of morphogenesis, either stimulating or inhibiting cell growth. The enterocyte growth factors are nucleopeptides that can be isolated from the intestinal mucosa of warm-blooded animals, such as pigs, rats, dogs etc., using a claimed method of the invention. They can useful for modulating morphogenesis, e.g. in the treatment of cancers, and have higher effectiveness than previous stimulators and inhibitors of cell division.
                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

New nucleic acid encoding lysophosphatide acyltransferase from rape, useful for controlling triglyceride content and fatty acid composition in transgenic plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of a plant lysophosphatide acyltransferase (LPAAT).

1-acyl-sn-glycerol-3-phosphate acyltransferase) polypeptide.

1-acyl-sn-glycerol-3-phosphate acyltransferase) polypeptide.

1-pAAT catalyses acylation of the sn-2 position in glycerol. The polypeptide and polynucleotide are used to regulate activity of LPAAT in plants, specifically rape, particularly to control the fatty acid (especially erucic acid) content of seed oils (used in food and industrial applications). Transformation with LPAAT polynucleotide permits control over triglyceride content and fatty acid composition, allowing these to be adjusted to suit particular applications (especially high erucic acid content for industrial use but low content for food use).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention provides stimulating and inhibiting enterocyte growth factors (enterocytogenins) (see AAY95755-69) that influence the speed of enterocytogenins) (see AAY95755-69) that influence the speed of enterocyte growth factors are nucleopeptides that can be isolated from the intestinal mucosa of warm-blooded animals, such as pigs, rats, dogs etc., using a claimed method of the invention. They cancers, and have higher effectiveness than previous stimulators and inhibitors of cell division.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of inhibiting enterocyte growth factor IEGF16 (mol.wt. 1.10-1.30 kDa). The invention provides stimulating and inhibiting enterocyte growth factors (enterocytogenins) (see AAY95755-69) that influence the speed of morphogenesis, either stimulating or inhibiting cell growth. The enterocyte growth factors are nucleopeptides that can be isolated from the intestinal mucosa of warm-blooded animals, such as pigs, rats, dogs etc., using a claimed method of the invention. They care useful for modulating morphogenesis, e.g. in the treatment of cancers, and have higher effectiveness than previous stimulators and inhibitors of cell division.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a rat cocaine and amphetamine regulated transcript (CART) protein fragment which has been subjected to a protease digestion using an Armillaria mellea protease. The CART protein and its fragments have anorectic activity and are used to regulate appetite and in the breatment of obesity as well as type II diabetes and bulimia). They may also be useful in treating autoimmune disease, inflammation, arthritis, type I diabetes, multiple sclerosis, stroke,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CART; cocaine and amphetamine regulated transcript; rat; anorectic; appetite regulator; treatment; obesity; type II diabetes; bulimia; autoimmune disease; inflammation; arthritis; type I diabetes; menopause; multiple sclerosis; stroke; osteoporosis; Parkinson's disease; adipsia; menstrual complication; cancer.
                                                                       group 1 and 2. Omega-conopeptides are components of peptide toxins produced by marine snails of the genus Conus, and which act as calcium channel blockers. The invention relates to a method of producing analgesia in a mammal that comprises administering an omega conopeptide having activities in (a) inhibiting electrically stimulated contraction of guinea pig ileum and (b) selectively binding to omega conopeptide WVIRA binding sites in neuronal tissue, where these activities are within the ranges of those of omega-conoctosins WIIIA and TVIA. The method is used for treating chronic pain, especially neuropathic pain.
                                                       Sequences AAW95590-594 represent fragmnets within omega-conopeptides
                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated cocaine and amphetamine regulated transcript proteins - with anorectic and adipsic activity, useful for regulating appetite, particularly for treating obesity, also related nucleic acid,

Omega-conopeptides and their derivatives act as calcium channel blockers and may be useful for producing analgesia in nociceptive and neuropathic pain. The peptides bind to omega-conopeptide binding sites, which are present mainly in neuronal tissue, and inhibit norepinephrine release from nervous tissue. Conopeptides such as MVIIA and TVIA are effective as therapeutic agents for treating neurogenic conditions such as schizophrenia, tardive dyskinesia and acute dystonic reactions, inflammation and epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      / of test compound in blocking voltage-gated calcium channels,
to omega conopeptide binding site and inhibiting norepinephrine
osteoporosis, menopausal symptoms, menstrual complications and Parkinson's disease. CART is the protein responsible for the anorectic and adipsic phenotype associated with certain cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence is a cyclic peptide which competes with and competitively inhibits beta-amyloid binding to the p75 neurotrophin receptor (p75NTR). This is a low affinity nerve growth factor (MGF) receptor which is expressed by melancoytes and keratinocytes of the basal epidermis. Apoptosis can be inhibited by p75NTR via the upregulation of the Bcl-2 protein. If the receptor is occupied by appropriate ligands e.g. neurotrophins, apoptosis is inhibited. Other examples of appropriate ligands include this cyclic peptide. This peptide is based on the sequence of the binding fragment of beta-amyloid, which binds to p75NTR in Alzheimer's disease. This cyclic peptide can be used in methods involve using this peptide or peptides AAY39233-Y39234 to bind as a pseudo-ligand to the p75 neurotrophin receptor, inhibiting apoptosis. The new method can induce or maintain hair growth, hair colour or skin colour. Inducing or maintaining hair growth is useful for treating alopecia areata or male pattern baldness in vertebrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

are useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus, Alzheimer's disease and spongiform encephalopathies (e.g. CJD, scrapie and BSE).
This invention describes novel agonists (competitive inhibitor) and/or inhibitors of amyloid formation peptides which are 3-15 amino acids in length and contain at least the active sequence GA. The new peptides
                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Omega-conopeptide; peptide toxin; snail; calcium channel blocker;

A hexapeptide sequence present in the gamma chain of native fibrinogen (see AAR39599) was mutated by the single substitution of a glycine for glutamine to produce KGAGDV (AAR39597). The novel peptide was found to retain Leukocyte Response Integrin ligand binding and PMN activation. Antibodies to the betal and beta2 integrin families had no effect on KGAGDV binding to LRI; antibodies to both beta3 and Integrin-Associated Protein inhibited KGAGDV binding to LRI.
                                                 A novel peptide comprising at least four residues from the contiguous amino acid sequence shown, is capable of binding endothelin or its precursor. The peptide is useful for determining the presence of endothelin and as an agent for preventing or inhibiting the action of endothelin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LRI; beta-integrin; cytoadhesin; ligand-binding specificity; polymorphonuclear neutrophil; integrin associated protein; IAP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide of lysine glycine alanine glycine aspartic acid valine amino acid chain - comprises ligand for leukocyte response integrin, inhibiting fibrinogen-dependent activation of polymorphonuclear neutrophil
                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 15; DB 14; Length 6; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to methods for inhibiting binding of beta-amyloid to the p75 nerve growth factor receptor. The methods comprise contacting the cell with a substance that binds to the p75 nerve growth factor receptor. The methods are useful in the diagnosis and treatment of Alzheimer's disease and other neurodegenerative diseases mediated by beta-amyloid protein, or by aberrant activation of the low affinity nerve growth factor receptor localised on neural cell surfaces. Such diseases include autoimmune encephalomyelitis, Huntington's disease, pick's disease, corticobasal degeneration, progressive supranuclear palsy, Gerotman-Shausslear Scheinker syndrome, Niemann-Pick disease and Down's syndrome. The present sequence is a cyclic peptide comprising a fragment of the human beta-amyloid protein to which a cysteine residue has been added at each end. The peptide inhibits binding of beta-amyloid to the p75 nerve growth factor receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta-amyloid; p75; nerve growth factor receptor; NGFR; anti-apoptotic; Alzheimer's disease; neurotrophin receptor; NTR; human; cyclic.
                                                                                                                                                                                                                                                                  Inhibition of beta-amyloid binding to the p75 nerve growth factor receptor using polypeptides, useful in the diagnosis and treatment of e.g. Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

the p75 nerve growth factor receptor (NGFR) of a cell. The method involves contacting the cell with a substance having the amino acid agequence lysine-glycine-lysine or lysine-glycine-alanine. The substance binds to the p75 NGFR resulting in the inhibition of beta-amyloid peptide binding to the p75 NGFR. The invention is useful or beta-amyloid peptide binding to the p75 NGFR. The invention is useful for evaluating the risk of an individual to develop Alzhaimer's disease and methods of therapy for Alzhaimer's disease using peptides that bind to the neurotrophin receptor. (NTR) and competitively inhibit the binding of beta-amyloid to the receptor. In vitro methods are also provided for screening substances and identifying those capable of inhibiting, or decreasing cell apoptosis mediated by beta-amyloid. The present sequence represents a cyclic pentapeptide that competes for p75NTR binding with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of inhibiting beta-amyloid binding to

                                                           Agonist; cytotoxic; competitive inhibitor; amyloid formation; treatment; type II diabetes mellitus; Alzheimer's disease; CJD; scrapie; BSE; spongiform encephalopathy.
                                                                                                                                                                                                                                                                                       This invention describes novel agonists (competitive inhibitor) and/or inhibitors of amyloid formation peptides which are 3-15 amino acids in length and contain at least the active sequence GA. The new peptides are useful for inhibiting amyloid formation and associated cytotoxicity in the treatment of type II diabetes mellitus, Alzheimer's disease and spongiform encephalopathies (e.g. CJD, scrapie and BSE).

                                                                                                                                                                                                                                                                                                                                                                                                                         q
```

```
The peptides are useful in the treatment of HIV and in the preparation of a HIV vaccine.
                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to peptides (AAM51251-AAM51381) with a higher affinity to gp120, part of the outer shell of HIV, than known peptides. Peptides with affinity to gp120 shown by formula (H-)A1-A2-A3-A4-A5-R (1), A1-A2-A3-A4-A5-R (2) or H-A1-A2-A3-A4-A5-R (2) or H-A1-A2-A3-A4-A5-R (6).

A1 - A2P, A3-A4-A5'-R (3), (H-)a1-a2-a3-a4-a5'-R (6).

A1 - A3P, L9s, Val, Glu, Glu, Gly, Asn or Tyr residue;

A2 - Val, Asp, Trp, Lys, Phe, Ile, Leu or Tyr residue;

A3 - Lys, Val, Asp, Arg, Ala or Trp residue;

A4 - A1a, Trp or Gly residue;

A5 - Gly, Val, Leu, Leu, Carlo, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      as = Gly, Ala, Val, Leu, Ile, Ser, Thr, Met, Asn, Gln, His, Lys, Arg, Phe, Tyr or Trp residue;
al' = Tyr, Arg, Phe, Gly, Trp, His or Asp residue, or a polypeptide residue having optional amino acids at N-terminal; and as = Gly, Ala, Val, Leu, Ile, Ser, Thr, Met, Asn, Gln, His, Lys, Arg, Phe, Tyr or Trp, or a polypeptide residue having optional amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Al' = Asp, Lys, Val, Glu, Gly, Asn or Tyr residue, or a polypeptide residue having optional amino acids at N-terminal;
A5' = Gly, Ala, Val, Leu, Ile, Ser, Thr, Met, Asn, Gln, His, Lys, Arg, Phe, Trp, Pro or Tyr residue, or a polypeptide residue having optional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 amino acids at C-terminal;
al = Tyr, Arg, Phe, Gly, Trp, His or Asp residue;
a2 = Arg, Tyr, Trp, Ala, Val, Gln, His or Lys residue;

This sequence is used in the production of a cyclic peptide AAY39235.

The cyclic peptide competes with and competitively inhibits beta-amyloid
binding to the p75 neurotrophin receptor (p75NRR). P75NRR is a low
affinity nerve growth factor (NGF) receptor which is expressed by
affinity nerve growth factor (NGF) receptor which is expressed by
melanocytes and keratinocytes of the basal epidermis. Apoptosis can be
inhibited by p75NTR via the upregulation of the BCl-2 protein. If the
receptor is occupied by appropriate ligands e.g. neurotrophins,
apoptosis is inhibited. Other examples of appropriate ligands include
this cyclic peptide. This peptide is based on the sequence of the binding
this cyclic peptide can be used in methods to p75NTR in Alzheimer's disease.
This cyclic peptide can be used in methods to control or manipulate
keratinocyte or melanocyte cell death. The methods involve using this
peptide or peptides AAY39234-Y39235 to bind as a pseudo-ligand to the p75
neurotrophin receptor, inhibiting apoptosis. The new method can induce or
maintain hair growth, hair colour or skin colour. Inducing or maintaining
hair growth is useful for treating alopecia areata or male pattern
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The peptide is capable of binding endothelin or its precursor. The peptide is useful for determining the presence of endothelin and as an agent for preventing or inhibiting the action of endothelin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Evaluating risk of individual to develop Alzheimer's - uses cultured epidermal melanocyte(s), also useful for developing therapies for neuro-degenerative diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta-amyloid; Alzheimer's disease; diagnosis; melanocyte; fragment; neurotrophin receptor p75; p75NTR; nerve growth factor; NGF.

                                                                      The invention relates to methods of therapy for Alzheimer's disease using peptides (AAW45343-6) that bind to the neurotrophin receptor p75 nerve growth factor receptor (NGFR) and competitively inhibit the binding of a beta-amyloid to the p75 NGFR. Also described is a new method for evaluating the risk of an individual to develop Alzheimer's disease using cultured neural crest-derived melanocytes. The methods can be used for diagnosing and treating Alzheimer's disease and other neurodegenerative diseases mediated by beta-amyloid protein, or by aberrant activation of the low affinity NGFR localised on neural cell surfaces, such as autoimmune encephalomyelitis, Huntington's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a fragment of a polypeptide of the invention. The polypeptides were isolated from the HL60 cell line. The polypeptide can be used as a drug, or as marker or surrogate marker for monitoring a cellular condition or disease achievable by application of staurosporine. They can also be used for identification of a drug for treatment of a disease selected from disease responsive to induction of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HL60; human; staurosporine; neurodegenerative disease; neuropathy; immunodeficiency; geriatric disease; transplant rejection; therapy; hyperproliferative disease; autoimmune disease; dermatological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cortico-basal degeneration, progressive supra nuclear palsy, Gerotman-Shaussless Scheinker syndrome, Neimann-Pick disease, and progressive supranuclear palsy. In the diagnostic tests, the human melanocytes, which are easily obtainable from skin biopsies, are good model cells for the study and diagnosis of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    neurodegenerative diseases e.g. neuropathies, immunodeficiencies, geriatric disease

The substituted cholic acids are prepared by initial solution synthesis of a scaffold folding amino acids with 3 orthogonal protecting groups. Subsequent solid phase synthesis provides build up of the target molecules, either as discretes or in mixture. The molecules may then be screened on the resin or cleaved from the resin and then screened in solution. The molecules are potential mimetics of larger peptides. The present sequence represents a single compound of the invention.
The peptide is useful for determining the presence of endothelin and as an agent for preventing or inhibiting the action of endothelin. See also AAR34869-80.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention relates to an antisense compound comprising nucleotides complementary to a nucleic acid sequence coding for anyloid precursor protein (APP) and which inhibits the expression of amyloid beta protein (Abeta) portion of APP coding sequence while permitting the expression of at least a portion of APP polynucleotide 5' to the Abeta portion of APP coding sequence. This antisense compound is useful for modulating the expression of Abeta in cells or tissues, for preventing or treating a disease or condition associated with expression of Abeta, in particular Albreimer's disease. The antisense compound is also useful for improving cognitive ability in a mammal having a disease or condition associated with the expression of Abeta.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

AAR34871 standard; peptide; 4 AA. Endothelin binding peptide. 18-AUG-1993 (first entry) AAR34871; RESULT 1 AAR3487.

Precursor; pre endothelin; agent; inhibitor; synthetic.

Synthetic.

JP05078391-A.

30-MAR-1993.

91JP-0232991. 12-SEP-1991; 91JP-0232991. 12-SEP-1991; (HITB) HITACHI CHEM CO LID.

WPI; 1993-140359/17.

Endothelin-binding peptide comprising 4 or more aminoacid(s) useful for detecting endothelin and modifying or inhibiting endothelin function

Example; Page 5; 8pp; Japanese.

The peptide is capable of binding endothelin or its precursor.

GENERAL INFORMATION:
APPLICANT: Repurnictu, Afroditi
APPLICANT: Repurnictu, Afroditi
APPLICANT: Brunner, Juergen
APPLICANT: Brunner, Herwig
TITLE OF INVENTION: Peptides Used As Agonists And/Or Inhibitors Of Amyloid
TITLE OF INVENTION: Formation And Cytotoxicity And Also For Use In
TITLE OF INVENTION: Alzheimers Disease, In Type II Diabetes Mellitus And
TITLE OF INVENTION: Alzheimers Disease, In Type II Diabetes Mellitus And
TITLE OF INVENTION: In Spongiform Encephalophathies
FILE REFERENCE: US 09/097,194
CURRENT APPLICATION NUMBER: US/09/097,194
CURRENT FILING DATE: 1998-06-12
EARLIER FILING DATE: 1997-06-17
NUMBER OF SEQ ID NOS: 21
SSEQ ID NOS: 21
SSEQ ID NO 12
